

Mobility...

Get the most out of Eureka with Integrated Mobile Stock modules.

A Eureka Mobile Handheld device can be loaded with a variety of software tools/modules to assist you in the efficient operation of your business.

Available options include >>

➤ Stock Taking

Stock takes are an essential and often unenviable part of running an efficient retail business. The Mobile Stock Taking module can simplify and expedite the process by improving the speed & accuracy of gathering stock count information for Eureka.

Your entire product catalogue can be downloaded to the handheld device in just a few minutes.

Staff take the device onto the shop floor and select products by Barcode, PLU, or Description. The "running count" is stored on the handheld and incremented as you move around the shop.

You can perform an entire shop stock take or a mini stock take by department or supplier.

You may also select products from within Eureka to be added to a targeted stock take list. This enables you to identify problem products or areas and conduct a quick adhoc check on these.

➤ Stock Checking

The Mobile Stock Checking module can help you find out quickly if a particular product is in your Eureka product database.

Search by Barcode, PLU or Description.

➤ Shelf Restocking

Keeping the shelves fully stocked is essential to maximising your profitability. With the Mobile Shelf Restocking module your Manager / Supervisor can move around the retail space quickly adding products to the "restocking list".

Products may be added by Barcode, PLU, or Description with the approximate quantity required.

With our optional "Restocking LIVE" functionality this order can be relayed instantly over a wireless connection to a restocking printer in your store. Floor staff take these orders as they appear on the printer and restock the shelves appropriately.

Bring an end to scribbled bits of paper, verbal instructions, and incorrectly filled or empty shelves.
